

SEMI-AUTOMATIC PACKING MACHINE FOR MOPS.

FLOW is a packing machine that typically works in combination with a mop manufacturing machine. The operator collects the finished mops and loads them onto FLOW for packaging.

FLOW is fed by a conveyor belt, where the operator loads the mops to be packaged. FLOW inserts the mop into the plastic film and seals it. The packaged mop is then ejected onto a conveyor belt.

Technical Data

Production (mops/min)	up to 25
Power consumption (kW)	3
Dimensions (mm)	L - 2350
	W - 1250
	H - 1950
